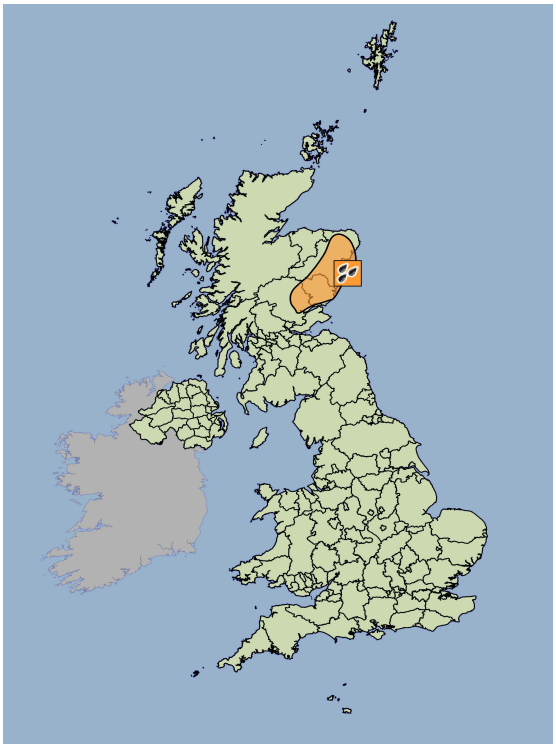
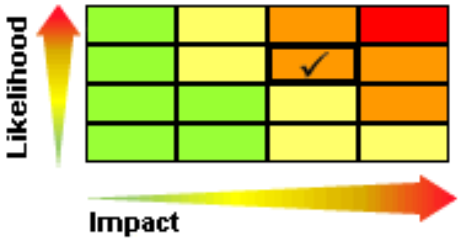
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal system will linger over the northeastern half of Scotland through Thursday onwards into Friday. Additional rainfall totals of 40 to 60 mm are expected quite widely with over 80 mm on high ground. Over hills and mountains some snow is expected, with the level to which snow falls dropping to 200 to 300 m during Thursday evening and night. Please note this warning should be viewed in the context of the wider yellow warning.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **10:45 on Thu, 07th Jan 2016** until **08:00 on Fri, 08th Jan 2016**

Further heavy and prolonged rain is expected across eastern and northeastern Scotland through the rest of Thursday into early Friday. Given the earlier exceptionally wet weather, with high river levels and saturated ground, please be prepared for further surface water and river flooding, as well as disruption to transport.

This is an update to the warning to extend it further northwards towards the Moray coast and eastwards into the Aberdeen area.
